

SQL Case Study: Online Bookstore Analysis

Optimizing sales & Inventory using Data
Submitted by: NIKHIL MISHRA

Project Objective

- ❑ Analyze Sales Trends: To understand which books are selling the most.
 - ❑ Customer Behavior: To identify high-value customers and their buying patterns.
 - ❑ Optimize Inventory: To manage stock levels and reduce dead stock using SQL.

Database Schema Overview

Books Table

- Book_ID
- Title
- Genre
- Price

Customers Table

- Customers_ID
- Name
- City
- Phone No

Orders Table

- Order_ID
- Quantity
- Total_Amount

Insight 1: Top selling Genres

Goal:

To identify which book genre are the most popular

Key insight:

“Mystery” and science Fiction are the top selling categories

Action:

Increase stock for these genres to boost revenue further

Insight 2: Top Customers Analysis

Goal:

To identify The most valuable Customers

Key insight:

These top 5 customers generate the highest revenue for the store.

Action:

Offer them loyalty rewards or special discounts.

Key Business Metrics

TOTAL REVENUE
75,628

Conclusion & Recommendations

- [?] Stock Management:
Increase inventory for "Mystery" and "Science Fiction" books as they are high in demand.
- [?] Customer Retention:
Launch a loyalty program for top customers like Kim Turner to encourage repeat purchases.
- [?] Revenue Growth:
Focus marketing efforts on high-value genres to maximize profit.
- [?] Future Scope:
Plan to build a Power BI Dashboard for real-time sales tracking.

A warm, inviting library interior. In the foreground, a wooden table holds a stack of books, a green glass lamp, an open book with glasses, and a cup of coffee. The background features tall wooden bookshelves filled with books, a ladder, and a sign that reads "New Arrivals". The scene is lit with soft, warm lights, creating a cozy atmosphere.

Thank You!
